

Electronic Vehicle License (eVL)

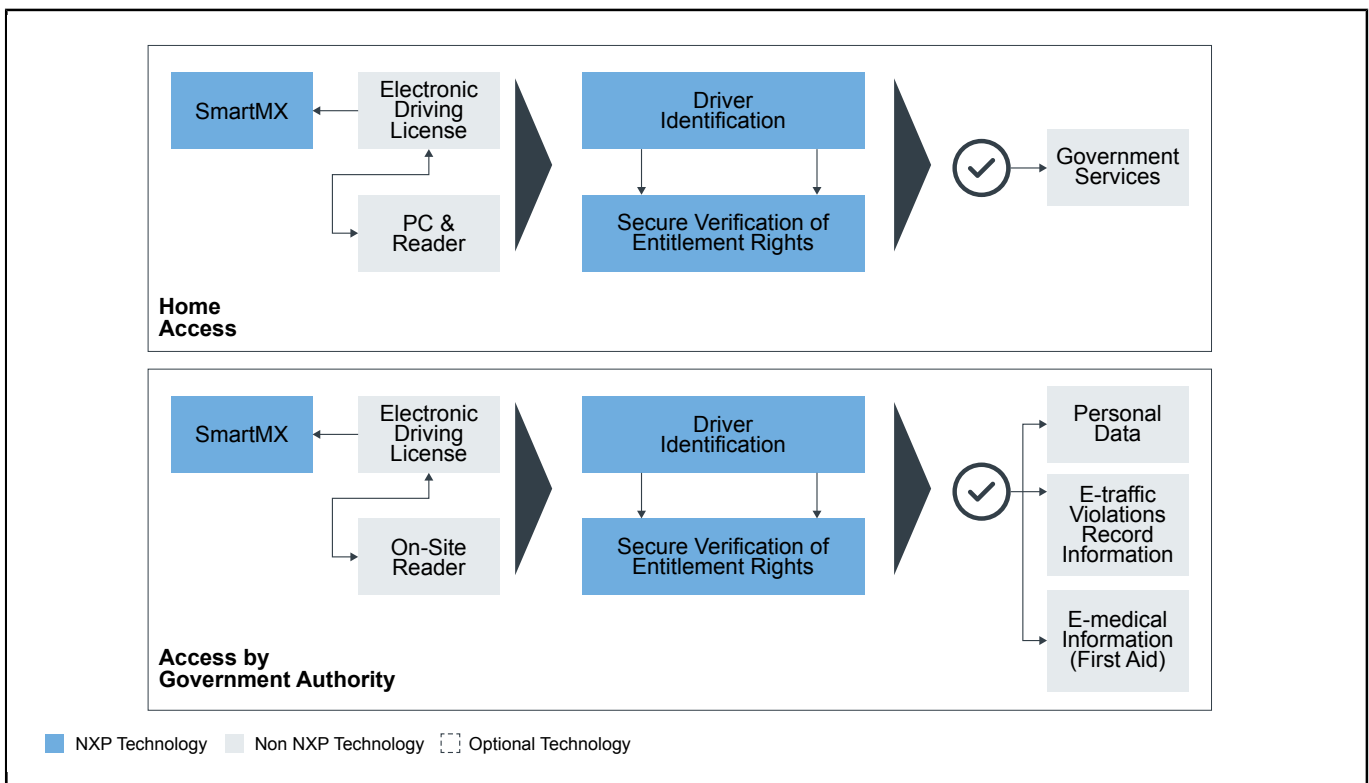

Last Updated: Nov 22, 2023

The electronic vehicle license serves both as proof of eligibility for driving a vehicle across borders and as a secure identity document during visual inspections by government officials and electronic services.

Our solutions improve road security while reducing fraud and help government officials streamline their administrative processes when integrating electronic vehicle registration, fine collection, and storing traffic violations in a single multi-purpose card.

Electronic vehicle licenses using NXP-based products are equipped to protect sensitive data and thus create the infrastructure of trust for online services.
