

Mask Set Errata for Mask 0N21P

This report applies to mask 0N21P for these products:

- S08PL60
- S08PL32

Table 1. Errata and Information Summary

Erratum ID	Erratum Title
ERR006657	ADC: ADC FIFO not working when the bus clock is slower than ADC clock divided by 2
ERR005264	DBG: Comparator C with TAG type can not generate breakpoint when setting breakpoint at the address other than instruction opcode address

Table 2. Revision History

Revision	Changes
20201029	Initial revision

ERR006657: ADC: ADC FIFO not working when the bus clock is slower than ADC clock divided by 2

Description: When the ADC FIFO mode is enabled, the FIFO can not get correct result if the bus clock is slower than ADC conversion clock divided by 2.

Workaround: Configure the bus clock to be faster than the ADC conversion clock (ADCK) divided by 2 if the ADC FIFO is used.

ERR005264: DBG: Comparator C with TAG type can not generate breakpoint when setting breakpoint at the address other than instruction opcode address

Description: When setting breakpoint at the address other than instruction opcode address, the comparator C with TAG type can not generate breakpoint. This issue does not affect code execution.

Workaround: If such tag breakpoint at the address other than instruction opcode address is required, use comparator A and/or B tag breakpoint.

Information in this document is provided solely to enable system and software implementers to use NXP products. There are no express or implied copyright licenses granted hereunder to design or fabricate any integrated circuits based on the information in this document. NXP reserves the right to make changes without further notice to any products herein.

NXP makes no warranty, representation, or guarantee regarding the suitability of its products for any particular purpose, nor does NXP assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation consequential or incidental damages. "Typical" parameters that may be provided in NXP data sheets and/or specifications can and do vary in different applications, and actual performance may vary over time. All operating parameters, including "typicals," must be validated for each customer application by customer's technical experts. NXP does not convey any license under its patent rights nor the rights of others. NXP sells products pursuant to standard terms and conditions of sale, which can be found at the following address: nxp.com/SalesTermsandConditions.

While NXP has implemented advanced security features, all products may be subject to unidentified vulnerabilities. Customers are responsible for the design and operation of their applications and products to reduce the effect of these vulnerabilities on customer's applications and products, and NXP accepts no liability for any vulnerability that is discovered. Customers should implement appropriate design and operating safeguards to minimize the risks associated with their applications and products.
