

MC56F8006 and MCF56F8002 Digital Signal Controllers

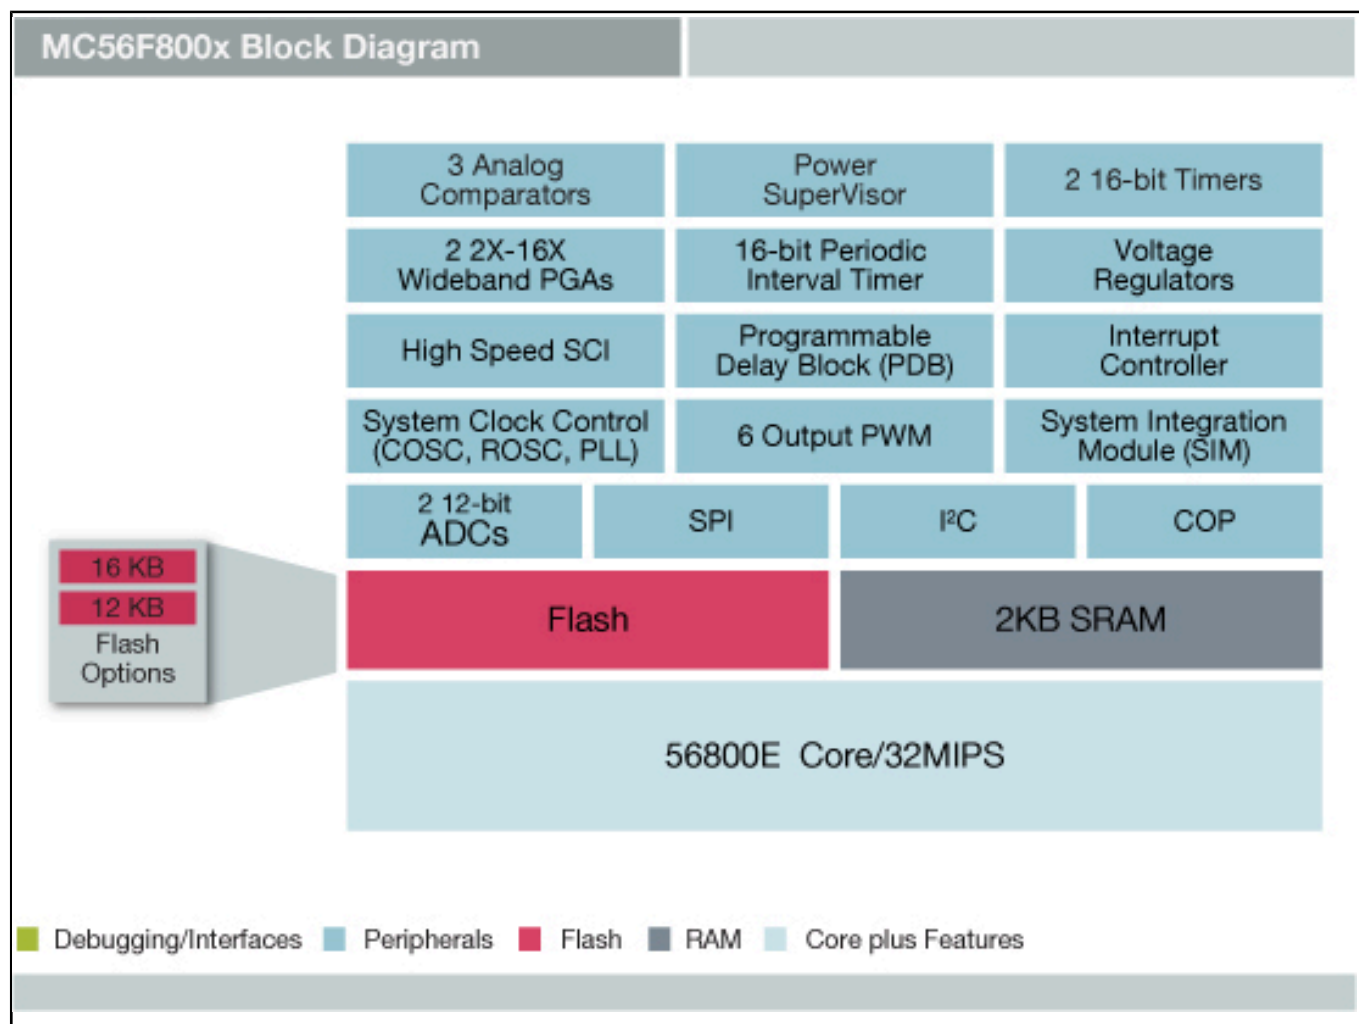

56F800x

Last Updated: Dec 15, 2024

The NXP® MC56F800x family of digital signal controllers (DSCs) offer the functionality of a microcontroller with a flexible set of peripherals. The entry-level MC56F8006 and MCF56F8002 DSCs provide cost-effective solutions for mathematically intensive, power-sensitive, real-time control applications.

- Integrated peripheral set improves performance while reducing external component count and overall costs
- Includes sophisticated power management features
- Allows for straightforward generation of efficient, compact DSP and control code
- Cost-effective development tools simplify and accelerate time-to-market
