The Digital Airfast solution "digital antenna" reference design is a highly innovative approach to radio design that removes mechanical, economical and design effort related complexities from radio designers. The design combines NXP baseband processing and RF front-end with Metanoia zero-IF transceiver technology. ArgoSemi includes innovative antenna technology that dramatically reduces system form factor and manufacturing complexity. The solution is optimized to outdoor private networks and MNO deployment extensions, extending to other RF bands in future derivatives with a common PCB footprint
