

Enterprise WAN

Last Updated: Nov 12, 2021

Routers have been how companies connected sites to each other and the internet. Enterprises and the providers that service them are now employing software for routing, WAN optimization, firewall, and LAN functions, typically in a chain of virtual network functions (VNF) or containerized cloud-native network functions (CNF) and managed via the cloud using SD-WAN software. Layerscape processors provide the standard Arm CPUs required for the virtual and universal CPE hardware (vCPE, uCPE) running this new software and the acceleration that enables differentiation.
