

GoldBox 3 Vehicle Networking Development Platform

GOLDBOX-3

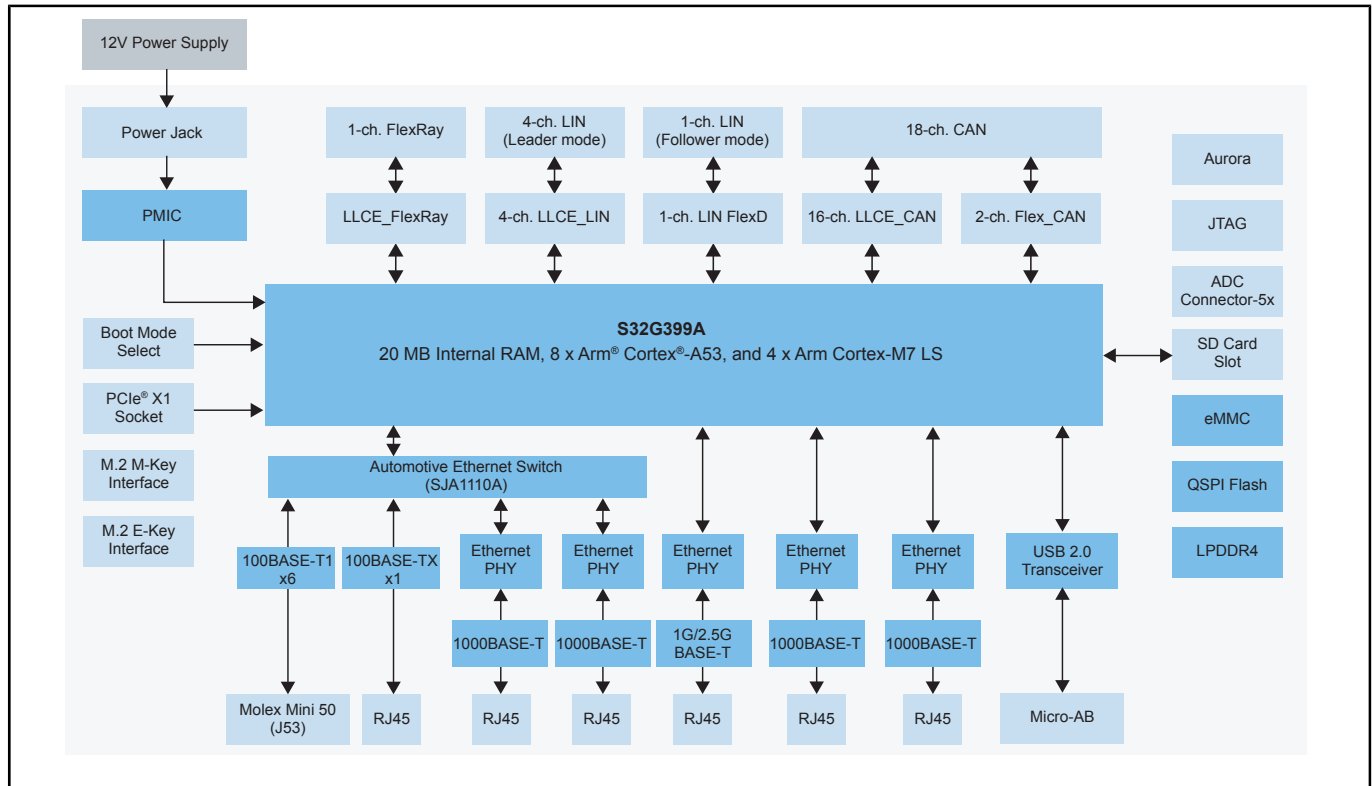

Last Updated: May 30, 2024

The NXP GoldBox 3 is a compact, highly optimized and integrated reference design engineered for vehicle computer, service-oriented gateway (SoG), domain control applications, high-performance processing, safety and security applications.

The NXP GoldBox 3 highlights the S32G3 network processor by offering high-performance computing capacity, real-time network performance, multi-Gigabit packet acceleration and security and rich input/output (I/O) targeting central gateway, domain controller, firmware over-the-air (FOTA), secure key management, smart antenna and high-performance central compute nodes.

Based on the S32G-VNP-RDB3, the GoldBox 3 is an excellent form-factor for customer or project demonstrations and evaluations, as well as in-vehicle testing and rapid prototyping.
