

Kinetis® K53–100 MHz, USB, Segment LCD, Ethernet Microcontrollers (MCUs) based on Arm® Cortex®–M4 Core

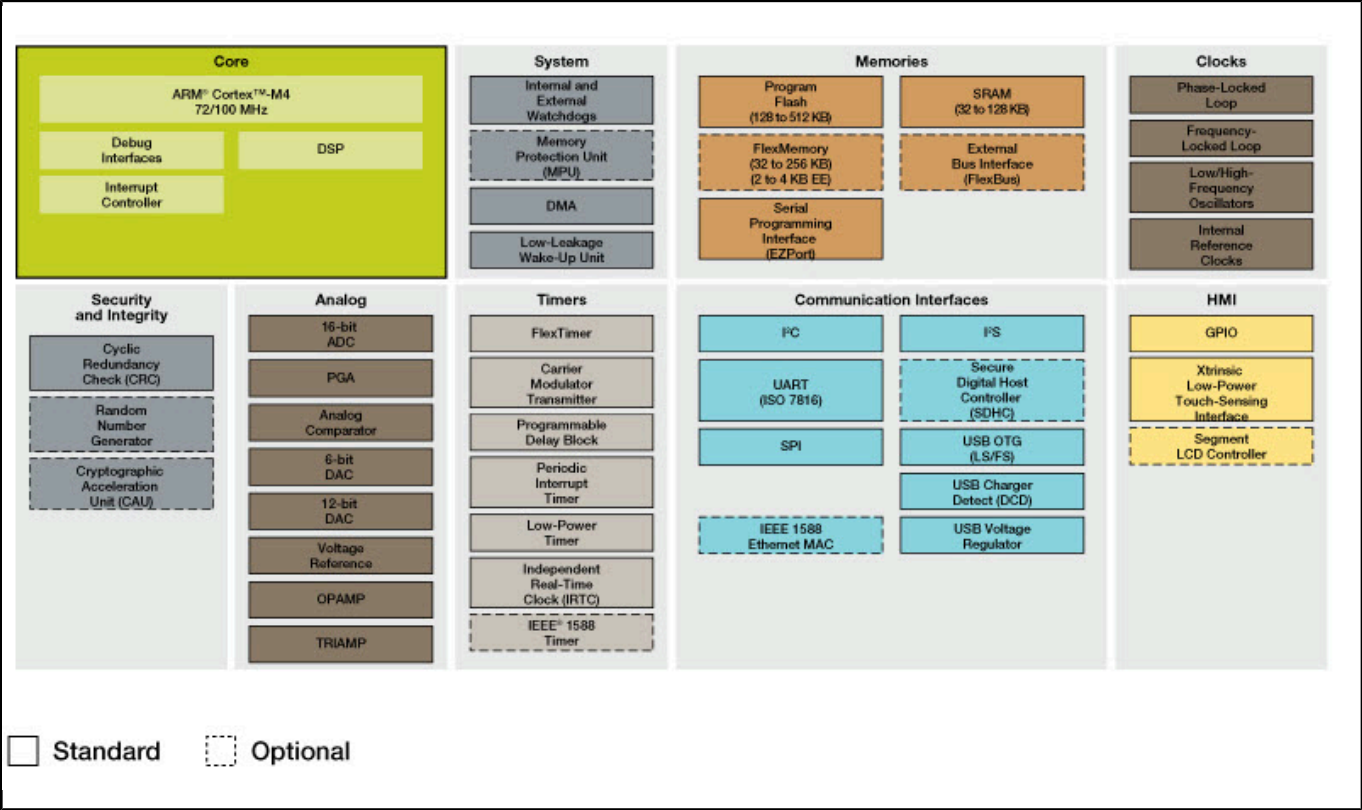

K53_100

Last Updated: Mar 5, 2025

The Kinetis® K53 100 MHz MCU family provides an analog measurement engine for medical and industrial applications.

- Reduces core interruption, increasing performance
- Enables design flexibility and system cost reduction
- Increases system safety by restricting access to key memory locations
- Provides scalability needed for key digital power and motor control applications
- Shares the Kinetis portfolio's comprehensive enablement support
