

DSI 2.02 Sensor Interface

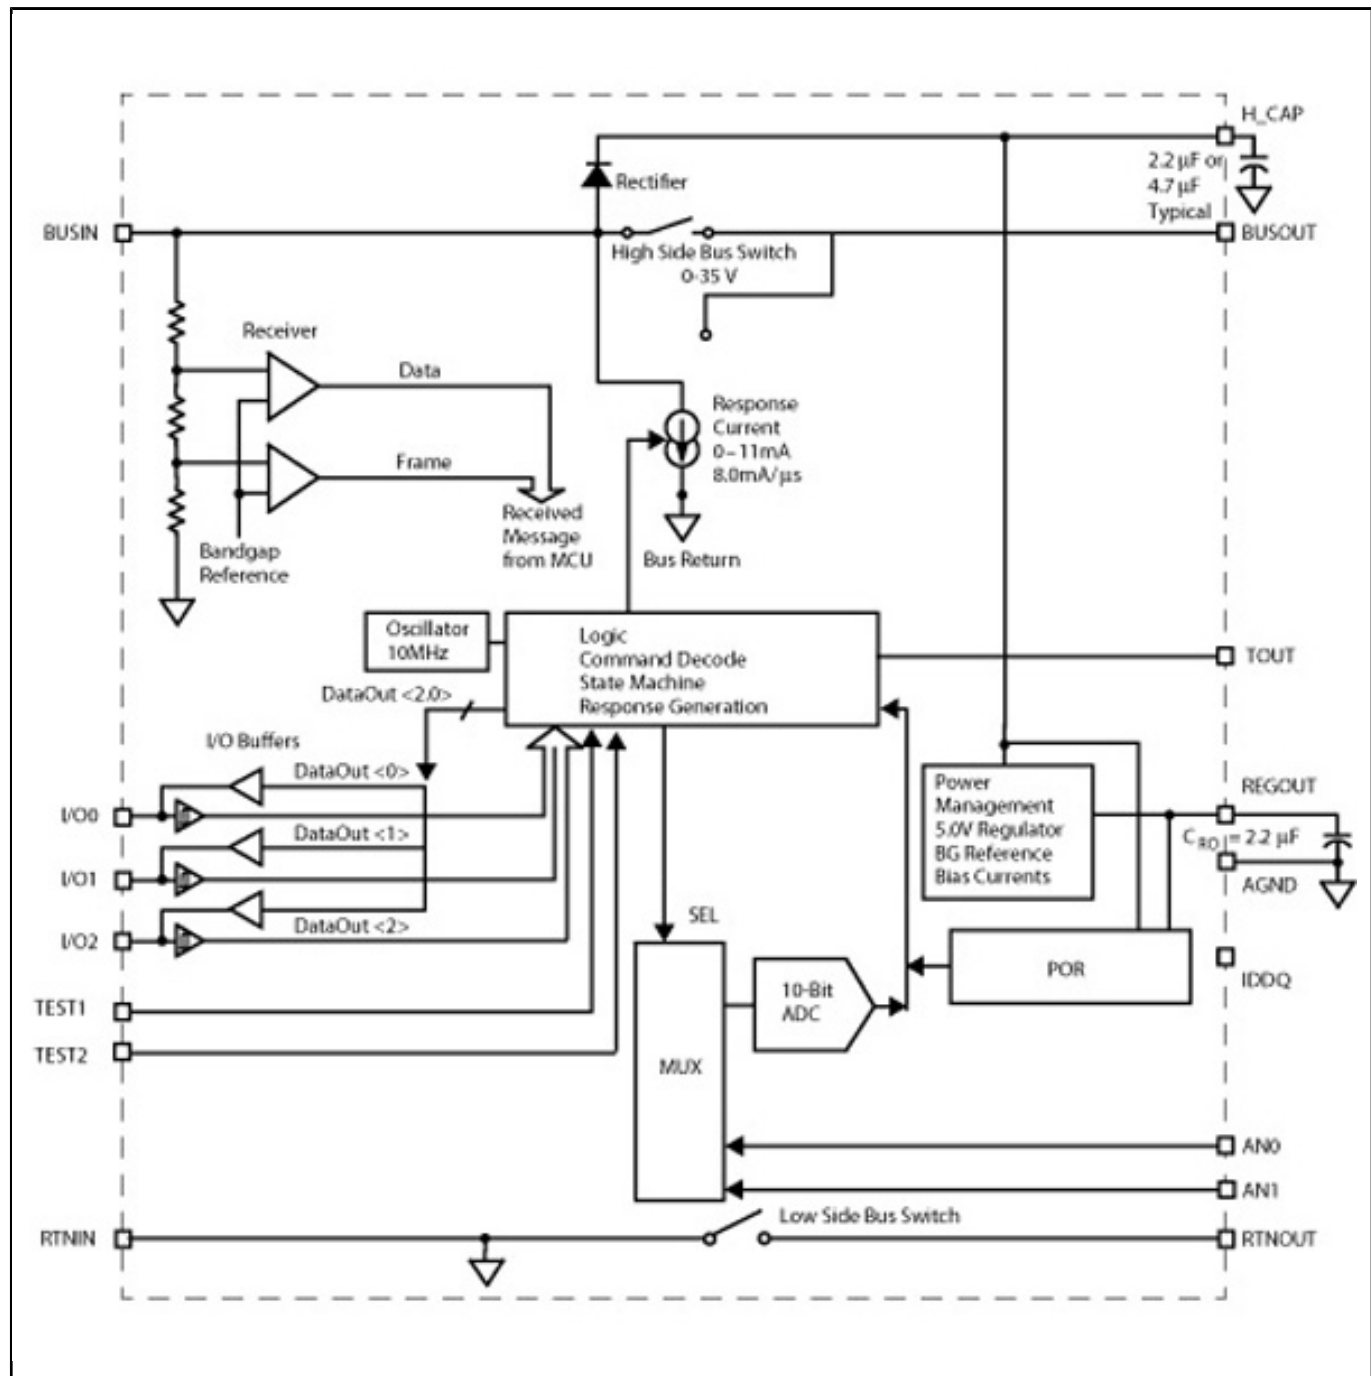

MC33784

Last Updated: Dec 15, 2024

The NXP® MC33784 is a follower distributed system interface bus (DBUS), version 2.02 compatible device optimized as a sensor interface.

- Contains circuits to power sensors such as accelerometers and to digitize the analog level from the sensor
- The device is controlled by commands over the bus, and returns measured data and other information over the bus
- Tools: Limited Evaluation boards available; contact sales
