

I3C/I²C-Bus ± 0.5 °C Accurate Digital Temperature Sensor

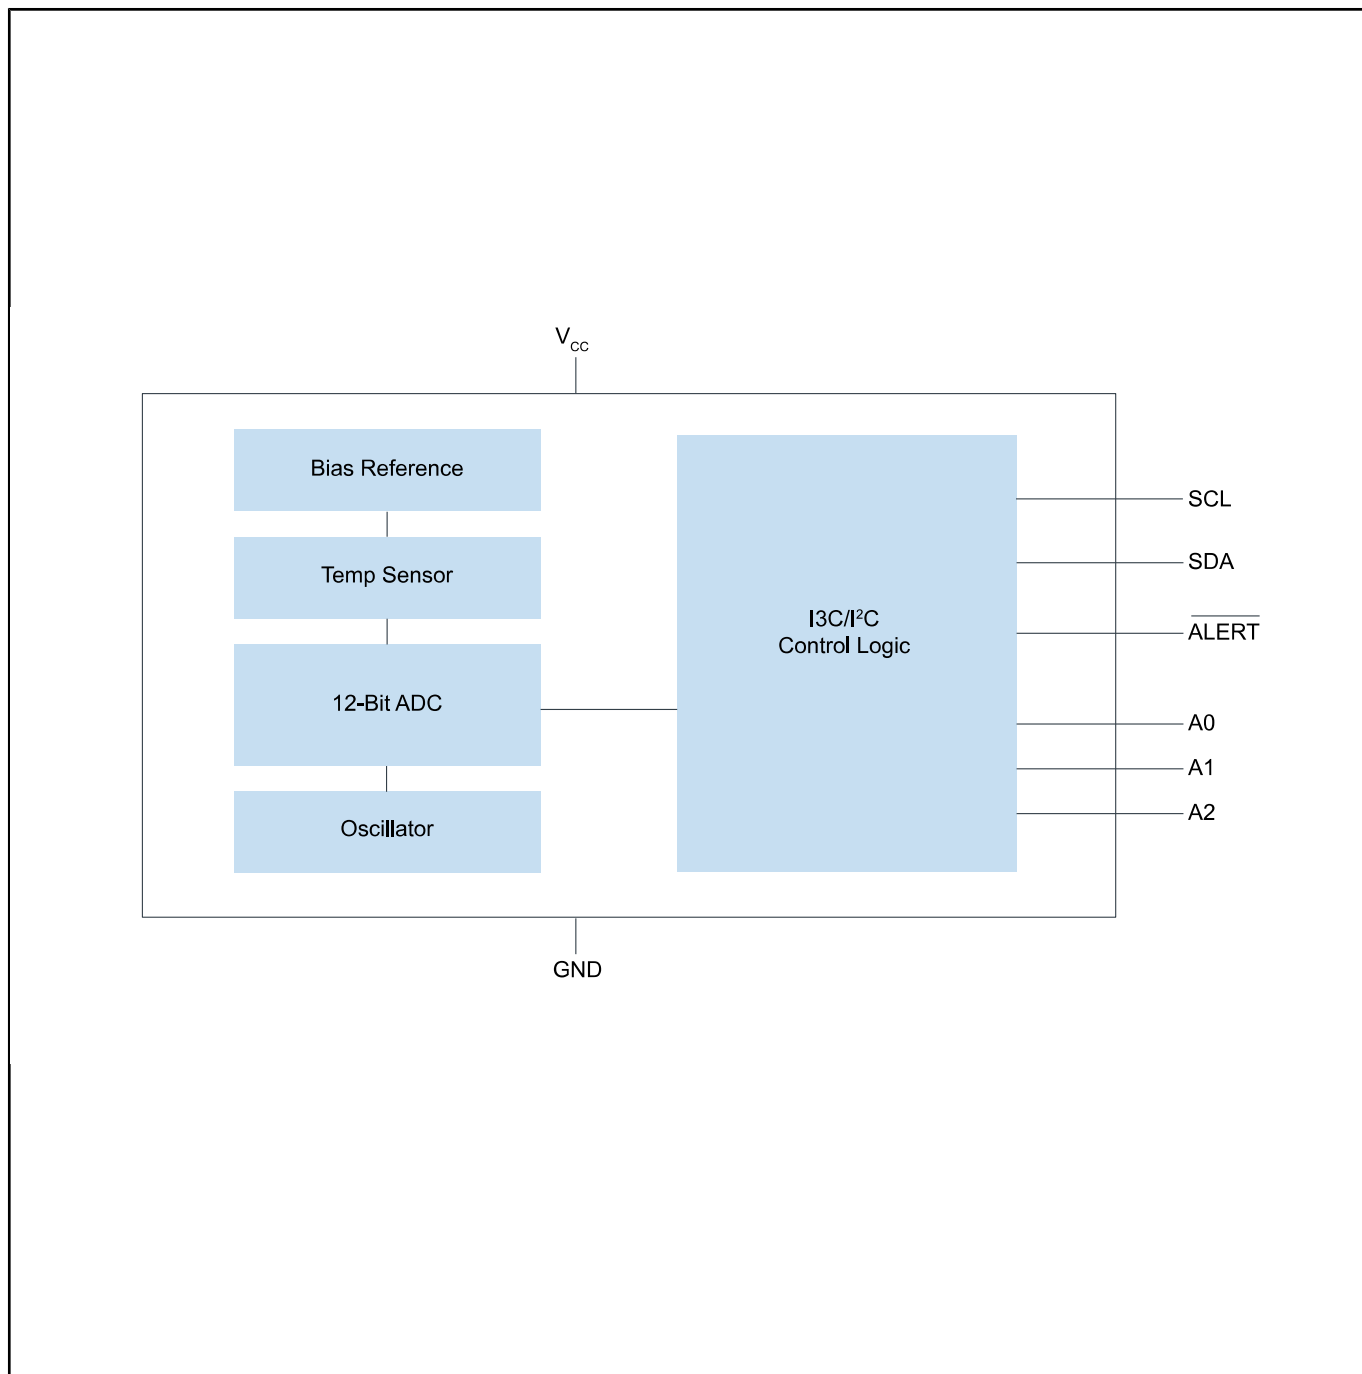

P3T1755DP

Last Updated: Apr 8, 2025

P3T1755DP is a $\pm 0.5^{\circ}\text{C}$ accurate temperature-to-digital converter with a -40°C to $+125^{\circ}\text{C}$ range. It uses an on-chip band gap temperature sensor and A-to-D conversion technique with overtemperature detection. The temperature register always stores a 12 bit two's complement data, giving a temperature resolution of 0.0625°C P3T1755DP which can be configured for different operation conditions: continues conversion, one-shot mode or shutdown mode.

The device supports 2-wire serial I3C (up to 12.5 MHz) and I²C (up to 3.4 MHz) as communication interface. In I²C, the device supports up to four target addresses and an alert function. In I3C, the devices support in-band interrupt (IBI), where the same bus is used to report the alert interrupts.
