

PCA9422 Ultra Low Power Charger +Gauge PMIC for RT5/6/700

PCA9422

Preproduction

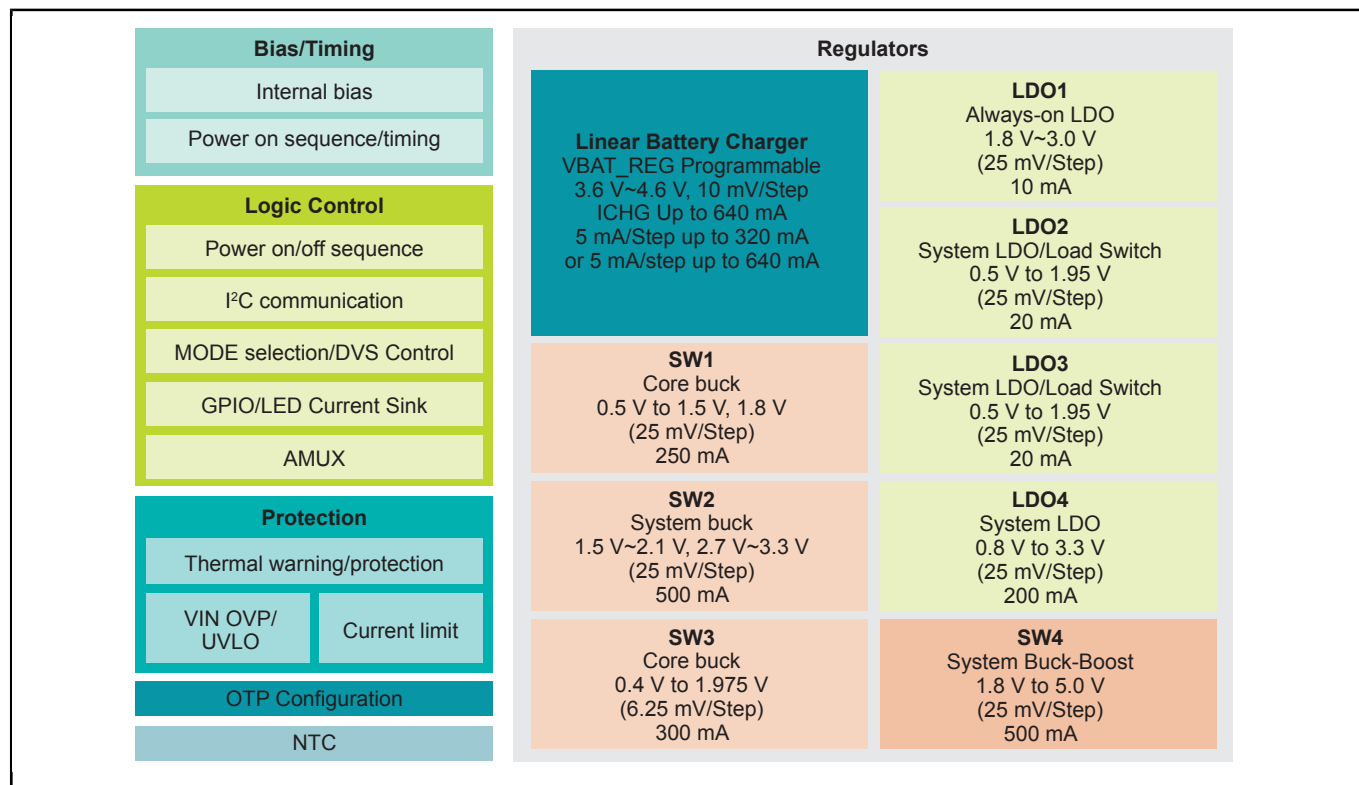

This page contains information on a preproduction product. Specifications and information herein are subject to change without notice. For additional information [contact support](#) or your sales representative.

Last Updated: Feb 13, 2025

PCA9422 is a highly-integrated Power Management IC (PMIC), targeted to provide a full power management solution for low power microcontroller applications or other similar applications with small batteries.

The device consists of a JEITA compliant linear battery charger capable of charging up to 640 mA current. It has I²C programmable values for flexible configuration. Various built-in protection features such as input overvoltage protection, overcurrent protection, thermal protection are also provided for safe operation. PCA9422 also introduces FLEXGAUGETM which allows for zero incremental cost battery gauging when combined with NXP MCU.
