# 56F801

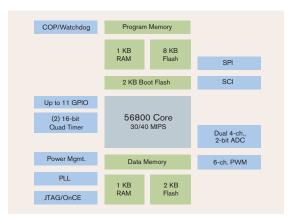

#### **Target Applications**

- > Pumps
- > Industrial fans
- > Exercise equipment
- > Smart appliances
- > Compressors
- > Compressors
- > Noise cancellation
- > HVAC

- > Remote monitoring
- > Tachometers
- > Cable test equipment
- > General-purpose devices
- > Switched-mode power supplies

#### Overview

The 56F801 is a member of the 56800 core-based family of digital signal controllers. It combines, on a single chip, the processing power of a DSP and the functionality of a microcontroller (MCU) with a flexible set of peripherals to create an extremely cost-effective solution. Because of its low cost, configuration flexibility and compact program code, the 56F801 is well-suited for many applications. The 56800 core is based on a Harvard-style architecture consisting of three execution units operating in parallel, allowing as many as six operations per instruction cycle. The microprocessor-style programming model and optimized instruction set allow straightforward generation of efficient, compact code for both DSP and MCU applications. The instruction set is also highly efficient for C compilers to enable rapid development of optimized control applications.

#### 56800E Core Features

- > Efficient 16-bit 56800 family digital signal controller engine with dual Harvard architecture
- > As many as 40 MIPS at 80 MHz core frequency
- > Single-cycle 16 x 16-bit parallel multiplier-accumulator (MAC)
- > Two 36-bit accumulators, including extension bits
- > 16-bit bidirectional barrel shifter
- > Parallel instruction set with unique addressing modes
- > Hardware DO and REP loops
- > Three internal address buses
- > Four internal data buses
- > Instruction set supports both DSP and controller functions
- > Controller-style addressing modes and instructions for compact code
- > Efficient C compiler and local variable support
- > Software subroutine and interrupt stack with depth limited only by memory
- > JTAG/on-chip emulation (OnCE™) debug programming interface

#### Benefits

- > Onboard voltage regulator and power management is designed to reduce overall system cost by allowing for a single supply voltage
- Internal relaxation oscillator for cost-sensitive applications by eliminating the need for an external crystal
- > Flash memory is engineered to provide reliable, nonvolatile memory storage, eliminating the need for external storage devices
- > Easy to program with flexible application development tools
- > Simple updating of Flash memory through serial peripheral interface (SPI), serial communications interface (SCI) or OnCE port, using on-chip boot loader
- > Program can boot directly from Flash
- > Supports multiple motors or multiphase control
- > Patented distortion correction in pulse-width modulation (PWM) for lower-risk, better performing control
- > PWM and analog-to-digital converter (ADC) modules are tightly coupled to reduce processing overhead
- > Low-voltage interrupts (LVIs) protect the system during brownout or power failure
- > Simple interface with other asynchronous serial communication devices and off-chip EE memory

### **Energy Information**

- > Fabricated in high-density CMOS with 5V-tolerant, TTL-compatible digital inputs
- > Uses a single 3.3V power supply
- > On-chip regulators for digital and analog circuitry to lower cost and reduce noise
- > Wait and stop modes available

#### 56F801 16-bit Digital Signal Controller

- > Up to 40 MIPS operation at 80 MHz core frequency
- > DSP and MCU functionality in a unified, C-efficient architecture
- MCU-friendly instruction set supports both DSP and controller functions: MAC, bit manipulation unit, 14 addressing modes
- > 12 KB On-chip Flash
  - 8 KB Program Flash
  - 2 KB Data Flash
  - 2 KB Boot Flash
- > 1 KB Program RAM
- > 1 KB Data RAM
- > Hardware DO and REP loops
- > 6-channel PWM module
- > Two four-channel, 12-bit ADCs
- > SCI
- > SPI
- > JTAG/OnCE port for debugging
- > On-chip relaxation oscillator
- > 48-pin LQFP package
- > 11 shared general-purpose input/output (GPIO) pins
- > Two general-purpose quad timers

#### 56F801 Memory Features

- > Harvard architecture permits as many as three simultaneous accesses to program and data memory
- > On-chip memory including a low-cost, high-volume Flash solution
  - 12 KB On-chip Flash
  - > 8 KB Program Flash

- > 2 KB Data Flash
- > 2 KB Boot Flash
- 1 KB Program RAM
- 1 KB Data RAM
- > Programmable Boot Flash supports customized boot code and field upgrades of stored code through a variety of interfaces (JTAG, CAN, SPI)

#### 56F801 Peripheral Circuit Features

- > PWM with six PWM outputs, two fault inputs and fault-tolerant design with dead-time insertion; supports both center- and edge-aligned modes
- > Two 12-bit ADCs, which support two simultaneous conversions; ADC and PWM modules can be synchronized
- > Two general-purpose quad timers
- > SCI
- > SPI
- > 11 multiplexed GPIO pins
- > Computer operating properly (COP)/ watchdog timer
- > Two dedicated external interrupt pins
- > External reset pin for hardware reset
- > JTAG/OnCE for unobtrusive, processor speed-independent debugging
- > Software-programmable, Phase-Lock Loop (PLL)-based frequency synthesizer
- > Oscillator flexibility between either an external crystal oscillator or an on-chip relaxation oscillator

#### **Product Documentation**

DSP56800 Family Manual Detailed description of the 56800 family architecture and 16-bit DSP core processor and the instruction set *Order Number:* DSP56800FM

DSP56F80x User's Manual Detailed description of memory, peripherals and interfaces of the 56F801, 56F802, 56F803, 56F805 and 56F807

Order Number: DSP56F801-7UM

DSP56F801 Technical Data Sheet Electrical and timing specifications, pin descriptions and package descriptions *Order Number:*DSP56F801

DSP56F801 Product Brief Summary description and block diagram of the core, memory, peripherals and interfaces *Order Number:* DSP56F801PB

#### Ordering Information

 Part
 DSP56F801

 Supply Voltage
 3.0V-3.6V

 Package Type
 Low-Profile Quad Flat Pack (LQFP)

 Pin Count
 48

 Frequency (MHz)
 80

 Order Number
 DSP56F801FA80

 Part
 DSP56F801

 Supply Voltage
 3.0V-3.6V

 Package Type
 Low-Profile Quad Flat Pack (LQFP)

 Pin Count
 48

 Frequency (MHz)
 60

 Order Number
 DSP56F801FA60

## Award-Winning Development Environment

- > Processor Expert<sup>™</sup> (PE) technology provides a rapid application design (RAD) tool that combines easy-to-use, component-based software application creation with an expert knowledge system.
- > The CodeWarrior™ Integrated Development Environment (IDE) is a sophisticated tool for code navigating, compiling and debugging. A comprehensive set of evaluation modules (EVMs) and development system cards will support concurrent engineering. Together, PE technology, the CodeWarrior tool suite and EVMs create a comprehensive, scalable tools solution for easy, fast and efficient development.
