

The Connector: MC9S12NE64 Game

Quick Start Guide

Introduction

This guide is a quick overview of the “Connector: MC9S12NE64 Game”. It will also walk you through how to install source code and troubleshoot problems that may occur during game play.

The Connector is a standalone application that runs on a windows-based PC environment. The user controls the car by pressing the proper keys on the PC keyboard, and the messages are then sent to the Connector game via the keyboard port. With the MC9S12NE64 demo board (or evaluation board), OpenTCP stack software, and MC9S12NE64 source code, the game play becomes Ethernet optimized. This means the MC9S12NE64 demo or evaluation board becomes an Ethernet joystick.

This is possible because the MC9S12NE64 and the OpenTCP stack software have the ability to send and receive User Datagram Protocol (UDP) messages over the Ethernet. Once the UDP messages are received by the Connector game running on the PC, the Connector source code executes the desired response on screen.

The Connector and the MC9S12NE64 is an example of a simple Ethernet application that sends and receives UDP messages, but this example can be applied to real-world applications. For example, the MC9S12NE64, with the proper software, could be installed into a remote vending machine and UDP messages could be sent to home office. The MC9S12NE64 could send UDP messages that would inform the home office that the remote vending machine is out of inventory, out of change, or a power failure has occurred.

How to Install

The Connector has two modes of operation. In the first mode of operation, the game can be played using the keyboard. In second mode of operation, the game is played using the MC9S12NE64 demo or evaluation board. This mode of operation sends and receives UDP messages to and from the PC and the MC9S12NE64 board.

PC controlled game play

1. Insert the MC9S12NE64 Resource CD into the CDROM drive on the PC.
2. Click on the “MC9S12NE64 game” link.
3. Double click on “The Connector: MC9S12NE64 Game” link.
4. The Connector game will open and you can begin game play.

DEMO9S12NE64 or EVB9S12NE64 controlled game play

To play the game via the MC9S12NE64 MCU the Connector_App source code must be installed to the DEMO9S12NE64 or EVB9S12NE64 board. Please refer to the quick start guide included in the box for the exact details on how to program the Connector_App code to the board.

Source Code

Connector_Flash_MX for the Game

This game was created in Flash MX Professional 2004, and the UDP and TCP/IP communications was created by a third party tool called Flash Studio Pro V2. You can download trial versions of Flash Studio Pro V2 from the MDM website at <http://www.multidmedia.com/software/flashstudio/>.

All the Flash ActionScript (*.as) files are included on the MC9S12NE64 CD, and these files may be viewed in Notepad.exe. The raw flash (*.fla) files that contain the graphics of the game are not included due to Freescale Semiconductor, Inc. regulations.

Within the Flash ActionScript code, the extended commands for communicating with the board all contain the prefix “flashstudio ” and take the format of normal Flash FS commands – i.e.

`fscommand("flashstudio.socketlistenon", "_root.listenPort");` These commands can be found in the external script pages NE64_init.as and NE64_control.as.

The NE64_control.as page has all of the processing functions for commands received from the MC9S12NE64 board. All other external script pages are named according to the device that is controlled by the scripts. The majority of the scoring and game play functions are within the init_external.as page.

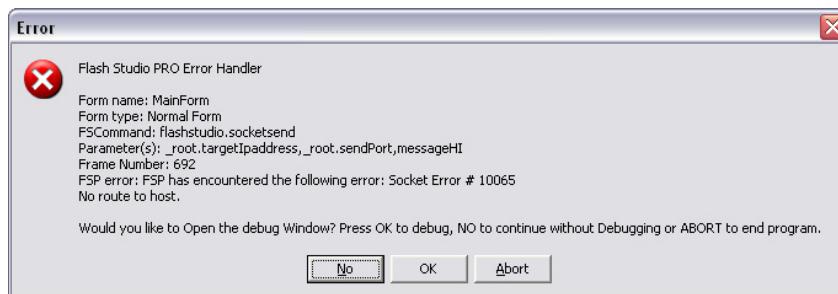

Connector_App for the DEMO9S12NE64 or EVB9S12NE64

The Connector_App source code for the DEMO9S12NE64 and EVB9S12NE64 was created using CodeWarrior Development Studio 3.1 for HCS12. The source code can be broken into three parts:

- User I/O – handles the input and outputs of the demo or evaluation board
- Scaled Down version of the OpenTCP stack to support UDP and TCP/IP only – handles the sending and receiving of the UDP messages in the MC9S12NE64 MCU
- Low-level EMAC and EPHY drivers – handles the configuration of the EMAC and EPHY

Troubleshooting

If you can not control the game play from the demo or evaluation board or the following window appears:

- Make sure the cable Ethernet cable is a crossover cable. This cable is a special Ethernet cable that switches the Tx and Rx signals. This cable is included in the demo or evaluation board box.
- Make sure the board is powered correctly. Refer to DEMO9S12NE64 or EVB9S12NE64 quick start guide for further details.
- Make sure the IP address on the PC is 192.168.2.1 by performing a ping test. Refer to DEMO9S12NE64 or EVB9S12NE64 quick start guide for further details on how to perform a ping test.
- Make sure the Connector_App code is programmed into the MCU on the demo or evaluation board and perform a ping test.
- Make sure the IP address on the demo or evaluation board is 192.168.2.3 by performing a ping test. Refer to DEMO9S12NE64 or EVB9S12NE64 quick start guide for further details on how to perform a ping test.
- Make sure all the devices on the network are not using the following IP addresses: 192.168.2.3 (MC9S12NE64 IP address) or 192.168.2.1 (PC or Connector game IP address)
- To remove the Error Window, press the “No” button and press “R” on the PC keyboard to restart the game.
- The DEMO9S12NE64 or EVB9S12NE64 has the same MAC address as another device on the network. Remove the other device from the network and try again.

Other Issues

When using the keyboard controls, mission statements sometimes appear when pressing the space bar. If this occurs, reset the game by pressing the “R” key or re-launch the game application.

How to Reach Us:

USA/Europe/Locations not listed:

Freescale Semiconductor Literature Distribution
P.O. Box 5405, Denver, Colorado 80217
1-800-521-6274 or 480-768-2130

Japan:

Freescale Semiconductor Japan Ltd.
SPS, Technical Information Center
3-20-1, Minami-Azabu
Minato-ku
Tokyo 106-8573, Japan
81-3-3440-3569

Asia/Pacific:

Freescale Semiconductor H.K. Ltd.
2 Dai King Street
Tai Po Industrial Estate
Tai Po, N.T. Hong Kong
852-26668334
